

Proprietary Ingredients

LACTO-SACC®

Live viable microorganisms and lactic acid producing materials designed to promote good bacteria, gut integrity and support overall digestion.

ALLZYME® SSF

A selected strain of (non-GMO) *Aspergillus niger* is used to work in synergy with the animal's digestive system to break down layers of the feed that were previously inaccessible through digestion. This exposes more nutrient-rich layers for the animal to digest, such as amino acids, energy, calcium and phosphorus.

ACTIGEN®

Actigen is able to support immune defense, gut microbial health and gut function and development, thereby promoting overall health and performance.

BIOPLEX®

Bio-Plex mineral are a line of organic trace minerals that are bound organically to amino acids and a range of peptides, making them easily absorbed and readily metabolized, optimizing cattle performance

SEL-PLEX®

Sel-Plex® is supplied in a form that can be readily stored in tissues because of similarities between methionine and selenomethionine that are interchangeable during protein synthesis. Selenium plays an essential role in metabolism, orchestrating normal growth, supporting normal reproduction, neutralizing free radicals and supporting the body's normal defense mechanisms against infection. Selenium allows animals to optimize health status during periods of increased demand
