

Ful-O-Pep's Beef Limiter Feeds are designed to be used as a self limiting feed, but without all the salt. Generally, salt has always been the means to stop livestock from over eating. Our Limiting Feeds have a combination of low salt levels with the addition of animal protein, ammonium sulfate and magnesium oxide. The animal protein interacts with the ammonium sulfate, which when digested creates high nitrogen levels in the blood stream to give a FULL sensation. Magnesium Oxide is also used. Bitter in nature this will also deter consumption. Protein levels in these feeds may be considered high, but this is due to the animal protein and ammonium sulfate. Unused protein will be excreted and no side effects should occur.
