

# BIO-MOS<sup>®</sup> 2

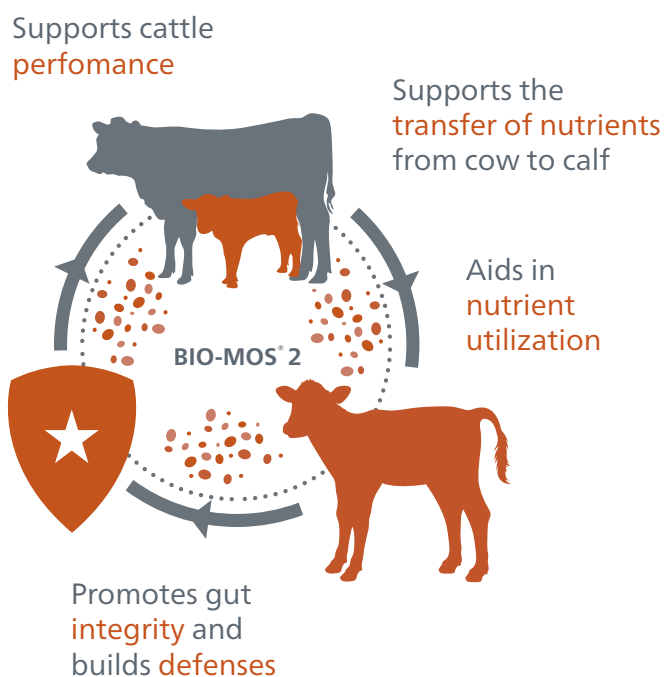

Build defenses and create a foundation for performance at weaning

When a calf has a healthy gut from the very start, the resulting benefits can cascade into all stages of the production cycle. With a healthy gut, calves can better absorb the nutrients in colostrum, and as they transition to creep feed, they can maximize their potential to achieve big gains and maintain performance with Bio-Mos<sup>®</sup> 2.

Bio-Mos<sup>®</sup> 2 is a yeast-based prebiotic that improves overall health and performance, especially during periods of high stress, by promoting good bacteria and building natural defenses in the gut.

In a recent study, scientists from the University of Florida Department of Animal Sciences evaluated the response of weaned calves to different supplemental feed additives during backgrounding over two separate feeding years:

## 5-LB. GAIN

Calves fed Bio-Mos 2 showed an average total gain increase of 5 lbs. over years one and two.

## 29-CENT DECREASE

Calves fed Bio-Mos 2 exhibited the lowest cost of gain, with an average decrease of 29 cents/lb.

Published: J. Anim. Sci. 2015.93:3169–3178

## Recommended Inclusion Rate:

Cow/Calf: 4-8 g/h/d
